Itemize:

- **Item 1:** Example of an item in an itemize list.
- **Item 2:** Another item demonstrating the use of itemize.
- **Item 3:** Yet another example to show list formatting.

Enumerate:

- 1 Item 1:** Example of an enumerated item.
- 2 Item 2:** Another enumerated item to illustrate the format.
- 3 Item 3:** Final item in the enumerated list.

Blocks

Note

This is a note block that provides additional information or comments about the topic discussed.

Example

Here is an example block that demonstrates how to use this particular format for presenting examples.

Alert

This alert block highlights important warnings or critical information that needs attention.

Let f and g be functions where $g : A \rightarrow B$ and $f : B \rightarrow \mathbb{R}$. Suppose g is differentiable at $x \in A$ and f is differentiable at $g(x)$. Then the composition function $f \circ g$ is differentiable at x , and its derivative is given by:

$$\frac{d}{dx} [f(g(x))] = f'(g(x)) \cdot g'(x). \quad (1)$$

Code

```
# Model definition
model = Sequential()
model.add(Flatten(input_shape=(28, 28)))
model.add(Dense(128, activation='relu'))
model.add(Dense(64, activation='relu'))
model.add(Dense(10, activation='softmax'))
model.compile(optimizer='adam', loss='
    categorical_crossentropy', metrics=['accuracy'])

# Model Training
history = model.fit(X_train, y_train, epochs=10, batch_size
    =32, validation_split=0.2)

# Model Evaluation
test_loss, test_acc = model.evaluate(X_test, y_test)
```

Algorithms

```
procedure BUBBLESORT(array)  
   $n \leftarrow \text{length}(\textit{array})$   
  for  $i \leftarrow 0$  to  $n - 1$  do  
    for  $j \leftarrow 0$  to  $n - i - 2$  do  
      if  $\textit{array}[j] > \textit{array}[j + 1]$  then  
        swap( $\textit{array}[j]$ ,  $\textit{array}[j + 1]$ )  
      end if  
    end for  
  end for  
end procedure
```
